Ganesh Sonyabapu Wakchaure

Full Stack MERN developer
ganeshwakchaure801@gmail.com | (+91)8010072112

Professional Summary : Enthusiastic and motivated Computer Engineering student with hands-on experience in designing and developing web applications using modern technologies including React.js, Node.js, Express.js, MongoDB, and Supabase. Experienced in building responsive user interfaces, integrating third-party APIs, managing databases, and collaborating in team-based software development projects. Possess a strong understanding of software development fundamentals, project architecture, and problem-solving, with a passion for learning new technologies and building scalable, real-world applications. Seeking an opportunity to apply my technical skills, contribute to impactful projects, and grow as a software developer in a dynamic and innovative organization.

SKILLS :

- **Frontend:** HTML5, CSS3, Tailwind CSS, JavaScript, React.js, Next.js
- **Backend:** Node.js, Express.js, OOPs
- **Databases:** MongoDB, MySQL
- **Other**: Git, GitHub, postman, REST API Development, MVC Architecture, Authentication & Authorization (JWT, Auth), Responsive Web Design, SEO Optimization, Cloudflare

EDUCATION :

BE Computer Engineering | SVIT, Nashik | Graduation completion: 2027

PROJECTS :

1) Geo Intelligence Platform – AI-Powered Industrial Lead Generation System

Tech Stack: React.js, Tailwind CSS, Express.js, MongoDB, Google Places API

Developed an industrial lead generation platform that helps businesses discover and analyse potential customers within specific location across the globe. Built a scalable full-stack application that collects place/industry information using Google Places API, including business name, category, address, contact details, website, ratings, and location data. Implemented data validation, deduplication, and lead scoring mechanisms to identify high-potential business opportunities. Integrated AI to generate concise business summaries and insights on demand, enabling users to quickly evaluate prospects.

1)SmartTransit – Real-Time Public Transport Tracking System
Tech Stack: Flutter, React.js, Node.js, Express.js, MongoDB

Developed a real-time public transport tracking platform that enables passengers and administrators to monitor public vehicles and access transit information. Built backend APIs for vehicle tracking, route management, and real-time data processing, along with a React-based admin dashboard and Flutter mobile application. Designed the system architecture and backend services to support efficient communication between vehicles, administrators, and passengers. The project won a hackathon and secured access to an accelerator program.
